

# Optimal control of donor spins in the silicon

Jing-Yu Xu<sup>1</sup>

<sup>1</sup>*Department of Physics, National Taiwan University, Taipei 10617, Taiwan*

Practical quantum computer requires scalable design. However, it'll meet the fault-tolerance threshold from lots of elements, such as leakage, noise..., etc. Therefore, the purpose of the research is to find the optimal pulses, which can improve the fidelity when controlling a quantum gate in the system donor spin in silicon.
